

ABSTRACT

- A method of desensitizing the scalp prior to a generally painful hair treatment or manipulation procedure by application of a composition containing a therapeutically effective amount of solubilized topical anesthetic and scalp/skin conditioning oils. The composition can
- 5 be used for the conditioning and desensitization of scalp and skin areas which are irritated, agitated, or traumatized by hair treatment procedures like braiding, corn-rowing, electrolysis, hair plugging, hair removal or any other hair treatment procedure that causes pain to the hair shaft or follicle.
